

COMFORT CIRCLE

Cassette Unit

Biddle

ALL ROUND COMFORT

With today's energy prices, building owners are increasingly aware of the need for an efficient climate system to heat or cool commercial offices and retail areas. A comfortable indoor climate creates a pleasant working environment for employees, and clients will naturally be inclined to stay for longer. For energy efficient heating and cooling in shops, supermarkets and offices, the space-saving Biddle cassette unit is the perfect candidate.

COMFORT CIRCLE RANGE

The Comfort Circle allows you to heat or cool the indoor space exactly as you wish, in a short period of time. For maximum comfort, the circular air discharge pattern ensures an even distribution of air throughout the room. Heating and cooling can be done separately or combined within one unit. Using a combined unit has the advantage of reducing the number of installed units required.

Climate equipment should preferably take up as little space as possible in your building. With the compact Comfort Circle, floor and wall surfaces remain available for shelves, racks and other furniture. The cassette unit is a recessed ceiling model and therefore meets this requirement. The unit can quickly and easily be installed in a suspended ceiling system; only the stylish circular air discharge grille is visible.

FEATURES AND BENEFITS:

- ⦿ Heating and/or cooling in one unit
 - ⦿ Space saving and unobtrusive
 - ⦿ Even air and temperature distribution
 - ⦿ Stylish air discharge grille
 - ⦿ Compact and low noise
 - ⦿ Suitable for lower water temperatures
 - ⦿ Option to reutilise residual waste heat
 - ⦿ User friendly and low maintenance
-

ENERGY-SAVING AND EFFICIENT

The Comfort Circle has been designed for use with a water based heating and cooling system. Nowadays, increasing emphasis is being placed on energy-efficient and sustainable climate units, which incorporate low water temperature ranges. This can be achieved, for instance, by utilising the waste heat of a cooling unit or heat pump. The Comfort Circle is compatible for use with this kind of system. It is also possible to deploy a cooling unit for heating; the so-called changeover system. For optimum coordination between the cassette unit and the heat and cold sources, an optional changeover sensor can be fitted.

APPLICATIONS

The unobtrusive appearance and low noise emission make the unit ideally suited for use in shops, offices, showrooms, reception areas, museums, banks and libraries. Together with the automatic SensAir air curtain, the Comfort Circle forms a complete climate solution (for rooms with a maximum height of 4 metres). For ventilation, the Comfort Circle (ventilation model) can also be used in combination with the air2air heat recovery unit.

Heating

Cooling

Fig.1

Fig. 2

HOW IT WORKS

The bottom of the cassette unit consists of a panel with a circular air discharge grille. With recirculation units, the air intake and discharge take place via the same grille panel. The air is drawn in through the perforated pattern in the middle of the panel. After the air has been heated or cooled, it is blown evenly into the room across 360° via the air discharge openings on the side of the grille. The circular air discharge pattern generates an optimal and even air distribution, which ensures optimal penetration and air circulation even at low air speeds.

Warm air is discharged at a fixed 45° angle towards the floor, to achieve good downward penetration of the air into the room (fig. 1). When cooling, cold air is discharged horizontally along the ceiling to create an optimal draught free climate. This Coanda effect (fig. 2) gives a better distribution of the cooled air throughout the room.

AUTO-ADJUSTABLE RING

The air discharge grille of units that can both heat and cool is fitted with a patented adjustable discharge ring. The unit adjusts the ring automatically and in doing so selects the air discharge angle that best fits the particular heating (fig. 1) or cooling (fig. 2). Consequently, the downward penetration and distribution of the air are always guaranteed.

FIXED SETTING AIR DISCHARGE ANGLE

Units that either heat or cool only have a fixed setting for the discharge angle and do not have an adjustable ring.

CONTROLS

In commercial offices and retail areas quick and easy adjustment of the climate is essential for users. Therefore, Biddle's Comfort Circle comes with up to four different control options for a user-friendly solution for every situation. The client can set the desired room temperature via the control panel, quickly and easily bringing the indoor climate to the most comfortable level.

FOUR CONTROL OPTIONS:

1. BASIC UNIT WITHOUT CONTROLLER (B0)

The cassette unit is equipped with a transformer and is wired by default at one fixed setting.

2. FAN SPEED CONTROLLER (T0)

The cassette unit is fitted with a fan speed controller that is compatible with external control systems, such as a building management system. The fan speed is then controlled externally (0-10 Volts or zero-voltage)

3. THERMOSTATIC AIR-SIDE BIDDLE CONTROL (S0/S1)

This plug & play control regulates the fan speed (three speeds) to obtain the desired room temperature. The control can be delivered with a fixed (S0) or an auto-adjustable discharge angle (S1).

4. MODULATING AIR AND WATER-SIDE BIDDLE CONTROL (M0/M1)

The most comprehensive plug & play control for the cassette unit regulates both the fan speed and the discharge air temperature, to achieve precisely the desired temperature. This control can be delivered with a fixed (M0) or an auto-adjustable discharge angle (M1).

Both Biddle controls (thermostatic and modulating) are controlled by a well-designed and user-friendly control panel.

The control panel has various soft-touch keys and a handy LCD display. The desired room temperature is easily set via the control panel, after which time the control maintains the climate at the correct level. The keys can be locked with a 'key lock'.

One control panel can be connected to and operate a maximum of ten units. The units are then linked together. The maximum length of the control cables in a control system is 100 metres.

The control panel has various menus for several settings, such as use, installation, service and setting the week timer.

⊕ Automatic or manual operation

The control panel allows the user to choose between automatic or manual operation of the cassette unit. In the automatic mode, the correct fan speed is set on the basis of the temperature difference between the actual room temperature and the desired room temperature.

⊕ Automatic on and off control

The control panel features a week timer for switching the unit on and off automatically, each day of the week.

MAXIMUM CONVENIENCE

If you choose one of the two integrated Biddle controls, the units will be delivered completely ready to use: plug & play. For connection to the mains, the units are equipped with a fixed cable and a moulded plug. The control panel, any extra units, inputs and outputs can be connected via the connector plate.

PROJECT SPECIFIC MODIFICATIONS

The Comfort Circle comes with three fixed tapping voltages (fans speeds) as factory default. By using a built-in transformer it is possible to adjust the standard speeds to the specific situation.

SELECTION & OPTIONS

The Comfort Circle is suitable for recirculation and can either heat, cool, or do both. The circular air discharge pattern generates an even air distribution throughout the room. Air is extracted from the room via the small openings at the bottom of the unit. After the air has been heated or cooled, it is blown into the room at 360° via the air discharge openings on the side of the grille.

THE COMFORT CIRCLE IS AVAILABLE IN TWO MODELS:

CC 60

Max. air flow is 740 m³/h, suitable for heating rooms of 100 m²

CC 90

Max. air flow is 1630 m³/h, suitable for heating rooms of max. 200 m²

Specific criteria apply to cooling. This requires a cooling load calculation. The cassette unit is suitable for a maximum installation height of 4m.

OPTIONS:

- Recessed ceiling model
- Ventilation model
- Free hanging model available
- Water heating
- Recirculation: heating and/or cooling

CONTROL OPTIONS:

- Basic unit without control (B0)
- Speed controller compatible with external controls (T0)
- Thermostatic air-side control (S0/S1)
- Modulating air and water-side control (M0/M1)

STANDARD COLOURS:

- RAL 9016
- Other RAL colours are available on request

VENTILATION MODEL

The cassette unit is available as a ventilation model, but only in combination with heat recovery, model **air2air** HR. Information about the ventilation model is available on request.

HEAT RECOVERY • MODEL **air2air** HR

TYPE CODE: CC 60-H1C2-M1

CC	Comfort Circle
Model size	
60	60 x 60 recirculation
90	90 x 90 recirculation
Coil type	
H2	Hot water heating, 2-row
H3	Hot water heating, 3-row
C2	Cooling 2-row or change-over
C3	Cooling 3-row or change-over
H1C2	Heating 1-row, cooling 2-row
Control	
B0	Basic unit, excl. control, incl. trafo
T0	Fan speed controller
S0	Thermostatic airside control, excl. valve
S1	Thermostatic airside control with automatic angle adjustment, excl. valve
M0	Modulating air and waterside control, incl. valve
M1	Modulating air and waterside control with automatic angle adjustment, incl. valve

DELIVERY & ACCESSORIES

Various control and assembly accessories are available for the Comfort Circle.

STANDARD DELIVERY

- Two suspension brackets
- Two covering strips to adjust the air discharge pattern
- External condensation drain pump (for cooling)
- External condensation tray (for cooling)
- One or two water-side valves, fitted with actuators (only with modulating control)

CONTROL / OPERATION

If one of the two Biddle controls (S0/S1 or M0/M1) is used, these two accessories are always required:

- Control panel
- Low voltage cables (various lengths)

ACCESSORIES

- Suspension set
- Change-over-sensor
- CC 90 adaptor plate to suit ceiling tile

SMART SUSPENSION SYSTEM

Biddle cassette units can be installed either before or after fitting a suspended ceiling. The adjustable mounting system allows the unit to be moved in any direction. This means the unit can be positioned accurately, with minimal effort, and therefore easily integrated into the ceiling.

- Using an adaptor plate, the CC 90 is suitable for mounting in a suspended ceiling.

SPECIFICATIONS

CASING

The casing is made from zinc-plated sheet steel, additionally reinforced to minimise deformations and vibrations. The underside of the unit has a rotatable plastic air inlet and discharge grille. The casing is fitted with sound absorbing, heat insulating material. The complete unit is delivered as standard in the colour RAL 9016 (white). Other RAL colours are available at an additional charge.

FAN / MOTOR ASSEMBLY

The radial backward curved fans are mounted in the casing and cause no vibration. The fan is driven by an external rotor motor on ball bearings. The fan casing and the impeller are made from aluminium. The motor is manufactured in accordance with DIN 40050, protection category IP44 and insulation category B (CC 60) and F (CC 90). The motor is protected from overheating by thermal contacts, which will break the electrical circuit as soon as the maximum permissible motor temperature is exceeded (auto-reset).

HEATING /COOLING COIL (LPHW / LPCW)

The coil is manufactured with 3/8" copper tubes and aluminium fins. The coils are available in rows of 2 or 3. The operating pressure is max. 8 bar at max. 90°C. The diameter of the pipe work connections for coil type H1 is DN 15 (15 mm). For coil types H2, H3, C2 and C3 this is DN 20 (22 mm).

The maximum water range of an H2 coil with:

-  Thermostatic air-side control (S0/S1) = 80/60°C
-  Modulating air and water-side control (M0/M1) = 90/70°C

The maximum water range of an H3 coil with:

-  Thermostatic air-side control (S0/S1) = 70/50°C
-  Modulating air and water-side control (M0/M1) = 90/70°C

The maximum permissible operating pressure is 8 bar at a water inlet temperature of max. 90°C. The maximum permissible discharge air temperature is 65°C. If a unit has to be connected to a water range with higher temperatures, please consult Biddle for advice.

TECHNICAL EXPLANATION

WATER FLOW RATE

When water and room temperatures other than the values represented in the tables are used, the water flow rate can be roughly calculated using the formula below. Before doing so, the heating or total cooling capacity must be recalculated based on the tables with correction factors.

- m_w = water flow rate [l/h]
- Q = capacity [kW]
- C_{pw} = specific heat of water (=4.18) [kJ/kg°C]
- ΔT_w = temperature difference water [°C]
- P_w = density of water at 90°C (=0.984) [kg/l]

$$m_w = \frac{Q}{C_{pw} \Delta T_w \rho_w} 3600 \text{ [l/h]}$$

SOUND REFERENCE ROOM

In the tables, a sound pressure level in the reverberation sound field is given for all speeds. These sound pressure level values are based on the use of one unit in a reference room. The sound pressure in the room is determined dependent on the installation and the speed of the fan. The sound data are applicable to each unit and measured at a distance of 5 m from the unit.

	reference room	
Unit	Volume room	Reverberation time
CC 60	300 m ³	0.5 s
CC 90	600 m ³	0.6 s

Example calculation: What is the sound pressure level in the reverberation field when two CC 60 units at speed 2 are used in a room with a reverberation time of 0.7 sec and a volume of 600 m³

SOUND POWER LEVEL IN dB

CC60

Speed	Sound pressure level dB(A)	Sound power level Per octave band in the medium frequency, in dB (Hz)								Lw dB(A)
		63	125	250	500	1000	2000	4000	8000	
1	37.6	44.6	54.4	50.5	45.7	44.8	44.5	29.2	16.3	50.5
2	47.1	47.6	62.1	59.4	55.3	55	53.7	46.8	34	60
3	52.1	50.9	65.7	64.2	60	60.3	57.4	53.4	41.3	65

CC90

Speed	Sound pressure level dB(A)	Sound power level Per octave band in the medium frequency, in dB (Hz)								Lw dB(A)
		63	125	250	500	1000	2000	4000	8000	
1	37.9	62.5	58.6	55.1	50.6	46.9	39.6	29.8	17.1	52.5
2	49.9	56.5	68	65.3	61.1	60.5	55.7	48.5	38.3	64.5
3	56.9	60.8	72	71.1	67.8	67.1	64.3	57.1	48.5	71.5

WATER PRESSURE DROP

When water temperatures other than the values represented in the tables are used, the water pressure drop can be calculated using this formula. To do so, the water flow rate must first be calculated.

- ΔP_{w1} = water pressure loss, table values [kPa]
- ΔP_{w2} = water pressure loss [kPa]
- m_{w1} = water flow rate, table values [l/h]
- m_{w2} = water flow rate calculated using formula [l/h]

$$\Delta P_{w2} = \Delta P_{w1} \left(\frac{m_{w2}}{m_{w1}} \right)^2 \text{ [kPa]}$$

SOUND IN A DEVIATING ROOM AND WITH MULTIPLE UNITS

If a unit is used in a deviating room, or if multiple devices are used in a single room, the sound pressure level must be recalculated. This can be done using the formula below. The relevant table value can be found in the tables (general data).

- L_p = sound pressure [dB(A)]
- T = reverberation time in deviating room [s]
- T_o = reverberation time [s] (see table)
- V = volume deviating room [m³]
- V_o = volume reference room [m³] (see table)
- n = number of units

$$L_p = \text{table value} + \left(10 \log \left(\frac{T}{T_o} \right) - 10 \log \left(\frac{V}{V_o} \right) + 10 \log \left(\frac{d_o^2}{d^2} \right) + 10 \log (n) \right) \text{ [dB(A)]}$$

$$47 + \left(10 \cdot \log \left(\frac{0,7}{0,5} \right) - 10 \cdot \log \left(\frac{600}{300} \right) + 10 \cdot \log (2) \right)$$

$$47 + 1.5 - 3 + 3 = 48.5 \text{ dB(A)}$$

COMFORT CIRCLE

Technical Details

CORRECTION FACTORS HEATING CAPACITY

The heating capacities shown in the tables for coil types H1 and H2 are based on a water range of 80/60°C. The heating capacity for coil type H3 is based on a water range of 60/40°C. In both cases an air inlet temperature of 20°C is assumed. With different water temperatures and/or air inlet temperatures, the heating capacity must be multiplied by the correction factors given below.

CORRECTION FACTORS HEATING CAPACITY COIL TYPES H1 AND H2

CC H2/H1C2

Water range	Air inlet temperature					
	-10°C	0°C	10°C	15°C	18°C	20°C

Water pressure drop with 2-port valve	kpa	7.9	12.7	16

CC 60-C3

Air inlet conditions	°C/%	27/48		
Weight	kg	32		
Water range	°C	6/12		
Speed		1	2	3
Air volume	m ³ /h	430	620	740
Total cooling capacity	kW	3.3	4.3	4.9
Sensible cooling capacity	kW	2.3	3.1	3.6
Discharge air temperature	°C	11	12	12
Condensate	l/h	1.4	1.8	2
Water flow rate	l/h	470	615	705
Water pressure drop	kPa	4.1	6.7	8.6
Water pressure drop with 3-port valve	kPa	7.6	12.8	16.6
Water pressure drop with 2-port valve	kPa	7.6	12.8	16.6

- The unit is wired as standard on fan speed tapping 7, 9 and 11. This is speed 1, 2 and 3.
- The air inlet conditions are in compliance with Eurovent standards.

COOLING CC 90

BASIC DATA

CC 90

Electrical supply	V/ph/Hz	230/1/50										
Max. input current	A	1.2

- The air discharge temperature of units with modulating control is limited to 50°C.

CC60 DRAWING

INDEX

The corresponding numbers in the dimensional sketches are explained here: **7**-Air vent. **14**-Condensate discharge (only for cooling). **15**-Condensation pump (only for cooling). **16**-Condensation tray (only for cooling). **20**-Connection plate. **23**-Cooling for 4-pipes H1C3. **24**-Cooling or heating for 2-pipes. **51**-Heating for 4-pipes H1C3. **58**-Locking. **64**-Return. **78**-Slotted holes. **81**-Supply. **88**-Threaded rods (M8) are not supplied as a standard.

EXPLANATION DIMENSIONAL SKETCHES

⊙ All dimensions in mm
 ⊙ A = detail water connections
 The diameter of the pipework connections for coil type H1 is DN 15 (15 mm). For coil types H2, H3, C2 and C3 this is DN 20 (22 mm).
